## **INTRODUCTION**

Over the previous decade there has been a revolution in information storage, retrieval and processing. In medicine, information formerly available only in printed indexes is now searchable on computerized databases. We took advantage of this technology to create the database from which this bibliography is produced. The creation of a database allows the bibliography to become an on-going project capable of tracking publication activities of the hospital staff for years to come.

This is the first staff bibliography of this type produced for the Walter Reed Army Medical Center (WRAMC), and it is intended to be the first volume in an annual series. The impetus for this work, done by the Medical Library staff, came from a variety of sources. Our patrons have mentioned the difficulty of keeping up with recent research projects, especially outside of their own department or service. We felt that a hospital-wide bibliography would allow WRAMC staff and others access to the extensive, ongoing medical research and publication activity at Walter Reed. This initial volume describes our methodology and organizes the bibliography in two ways. The first section contains a hospital-wide list of citations sorted by the primary author's last name. The second part displays the same citations by hospital department or service. This volume covers material published during the years 1986 through 1989. Future volumes are expected to be issued yearly and will include any appropriate works not previously listed, as well as those published in the new year covered.

We wish to thank all the authors and staff who provided us with information about publications. Although we have made every effort to make this bibliography as complete as possible, we realize that some publications may have been unintentionally excluded. There are several reasons for this. Certain types of publications are not accessible by our computers. For example, we have no way to access information about book chapters, pamphlets, and articles published in journals not indexed by the databases we searched. For these, we must depend on the authors to let us know when their work is published.

Comments on this bibliography are welcome so that enhancements could be made in the future. Please direct your comments and additional information about publications to Judith Hartman in the Medical Library.

## **METHODOLOGY**

The following procedures define the methods used to create the WRAMC bibliography. Please note that this methodology is not necessarily intended to be a standard. Our approach to the creation of a hospital bibliography is only one of many possibilities.

- o **POPULATION DEFINITION.** Choose manageable parameters to include or exclude authors. The WRAMC bibliography includes all medical staff (physicians, nurses, and allied health personnel) currently assigned to Walter Reed. Excluded are former WRAMC staff and individuals assigned to the various tenant activities.

- o POTENTIAL AUTHORS. We received military physician lists from Clinical Support Services and the Military Personnel Division. The Civilian Personnel Office provided printouts with names of civilian physicians. Interlibrary loan request forms and Library registrations provided additional sources of names.
- o MEDICAL STAFF INPUT. Letters requesting publication lists were mailed and hand carried to all hospital medical departments, services and clinics. Personal visits were made to the above sites to ask for publication information. Printed handouts were distributed at the circulation desk. To encourage staff interest in the project, bulletin boards in the Library and hospital lobby display journal reprints by WRAMC authors. Direct staff input, however, accounts for only about thirty percent (30%) of publication information. The majority of the bibliographic information is downloaded by computer from online databases.
- o ONLINE DATABASES SELECTION. The National Library of Medicine's (NLM) MEDLINE database was searched for journal articles and NLM's CATLINE database for book authorship.
- o DATES OF INCLUSION. We chose the last four (4) years (1986- 1989) as an initial search parameter using the current MEDLINE (1989) and one backfile (1986-1988).
- o SOFTWARE EVALUATION. Various communication and bibliographic database management programs for searching, saving and editing publications were appraised. We chose Crosstalk XVI [3.61] for online searching, Biblio-Links [1.2] for reformatting and Pro-Cite [1.4] for editing downloaded files. The American Medical Association punctuation format (a Pro-Cite option) is used for citation display. WordPerfect [5.1] is used to format and polish the final bibliography.
- o CITATION INCLUSION. Journal articles, books, book chapters and letters indexed by MEDLINE are included. Abstracts, presentations, "in press" or "submitted for review" items are excluded because the information could not be verified by the Library staff.
- o CITATION VERIFICATION. Verification means that the bibliographer must be absolutely certain that the source of the citation exists. Publications lists provided by medical staff may be incorrect or inconsistent with computer generated citations. Citation verification is mandatory. Publication lists provided by staff members are checked against printouts from MEDLINE. Discrepancies are further verified in Index Medicus or the physical volume. All book citations are verified in the Online Computer Library Center (OCLC) database. OCLC is an online union catalog containing over twenty-one million bibliographic records. Verification is the most labor intensive activity in bibliographic preparation and is absolutely essential. If a questionable citation is not verifiable, it is not in the bibliography.

This methodology was used to create a bibliographic database that currently contains 1037 citations. The current software allows sorting by author and department. Sorts by services within department may be possible for future updates.

## ACKNOWLEDGEMENTS

The WRAMC bibliography has been in preparation for nearly a year. During that period many individuals offered assistance and support. We would especially like to thank John Enterline of the Johns Hopkins Oncology Center for his editorial comments and software support. Additionally, special thanks to Anne Dougherty and Kevin Canning of the Medical Library for providing valued assistance in database searching and verification. We would also like to thank Cpt. Lewis Mashburn, Clinical Support Services, for his early strong support for this project.
